

# Boron in Sugarcane

## Study Details

Research institution: Adubai

Researcher: Fabio Vale

Date: 2013 – 2015

Location: Morro Agudo, São Paulo, Brazil

Soil: Oxisol

Fertilizers: *Granubor*®, *Solubor*®, boric acid, and ulexite

Crop variety: CTC 15

Trial design: Pant cane. Randomized complete block design with 4 reps. Treatments applied in March 2014. *Granubor* and ulexite were applied directly on sugarcane stems at furrow. *Solubor* and boric acid were applied as liquid solution in the furrow.

## Results

Even without significant difference, the source *Granubor* and *Solubor* showed superior results in sugarcane yield.
