

# Boron in Oil Palm

## Study Details

Date: 2018-2019

Location: Malaysia

Soil: Peat soil

Fertilizers: *Fertibor*<sup>®</sup>

Trial design: RCBD model

## Results

This study showed the application of 100g of *Fertibor* per palm per year clearly increases the production yield of the palms for two different age groups of palms at two different plantations. *Fertibor* helps to increase the bunch weight per fresh fruit bunch and also the number of bunches per palm per year.

# Boron in Oil Palm

2018 (without B) / 2019 (100 g/ha of *Fertibor*)
