

Field trial: Canola

Study details

Research institution: NexusBioAg

Date: 2023

Location: Nipawin, Saskatchewan and Picture Butte, Alberta, Canada

Crop variety:

Soil: Boron content

Fertilizers: *Granubor*® and *Solubor*®

Results

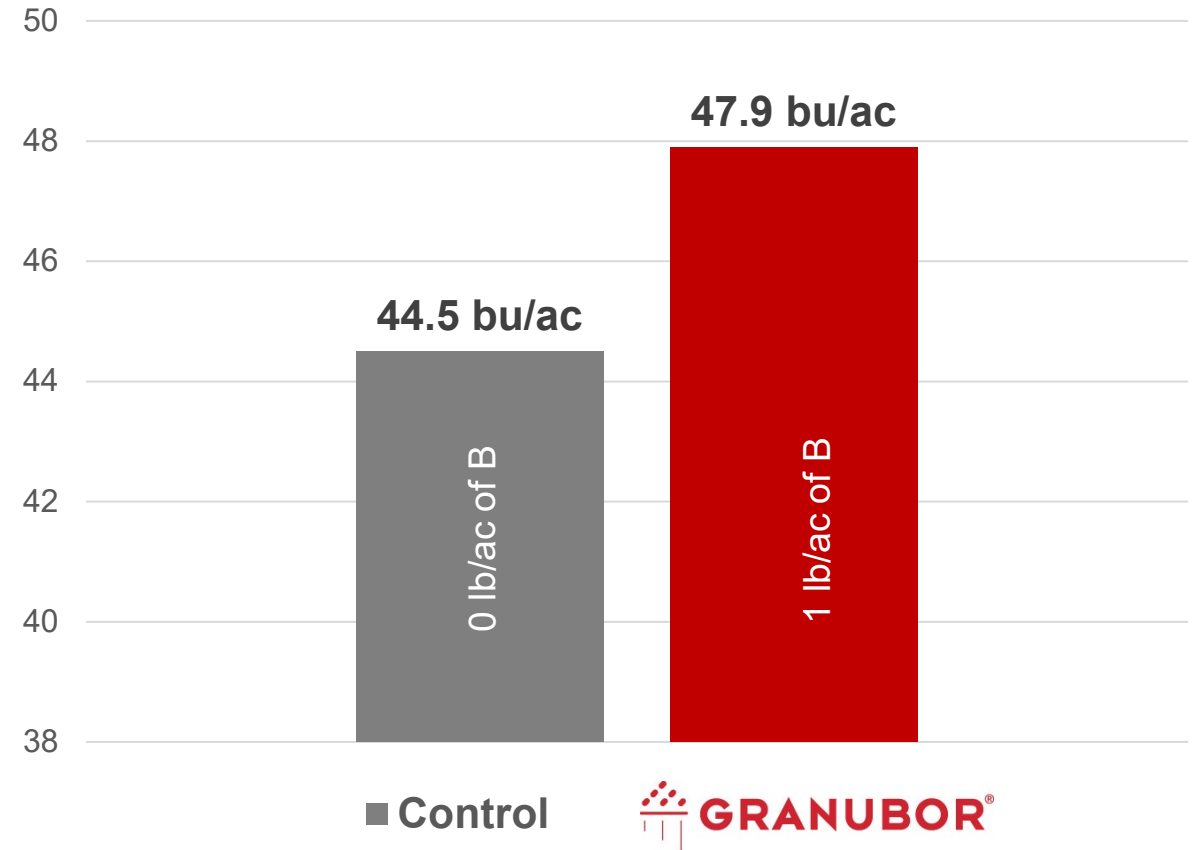

- Application of 1.0 lb/ac of boron via soil application (*Granubor*), provided 7.64% yield increase in comparison to the control treatment
- Application of 0.5 lb/ac of boron via foliar application (*Solubor*), provided 4.4% yield increase in comparison to the control treatment

Nipawin, Saskatchewan

Granubor provided 7.64% yield increase in comparison to the control treatment

Canola response to boron application via soil

Picture Butte, Alberta

Solubor provided 4.4% yield increase in comparison to the control treatment

Canola response to boron application via foliar
