Global Micronutrient Summit 2.0

5-6 October 2023

The Leela Palace Hotel, New Delhi, India

Today, micronutrient deficiency in soil and crops is the rule rather than the exception. Many countries are witnessing multi-micronutrient deficiencies—dominated by zinc and boron deficiencies—which adversely impact crop yield and quality. Deficiencies of micronutrients such as zinc and iron are also affecting human health leading to micronutrient malnutrition.

The Global Micronutrient Summit 2.0 takes a comprehensive view on micronutrient deficiency in soils, crops, and humans. It will also highlight the emerging global trends in micronutrient fertilizers, mainly zinc and boron.
