

PRODUCT DATA SHEET

SOLUBOR® FLOW

10% B w/w

130g B/l

$\text{NaB}_5\text{O}_8 \cdot 5\text{H}_2\text{O}$

Sodium pentaborate

CAS Number 12631-71-9

Highly compatible, easy to apply

Solubor® Flow is a solvent-free, liquid boron formulation. It's a sodium borate placed in suspension without the use of chemical solvents. The product is non-viscous and non-oily.

Solubor Flow is used in the following applications:

- As a spray to prevent boron deficiency in sensitive crops
- As a foliar spray on young plants
- Sprayed on the ground in a mixture with nitrogen solution
- To provide the boron by fertigation or hydroponic growing where these systems are used

Recommendations for use

Solubor Flow should be dissolved in water and applied by spraying onto crops or also, by mixing with other liquid fertilizers for direct application on the ground. It can be introduced by using the hydromixer (when the sprayer is equipped) or directly in the tank.

In both cases, vigorous stirring must be maintained during the filling and mixing operations. Use as directed. Always consult an agronomist to determine the right rate, time, and method of application.

Sodium content

Because *Solubor* Flow is a sodium borate, it also provides sodium in significant quantities for demanding crops such as sugar beets (the content of the *Solubor* Flow solution is a concentration of boron with 200 ppm B and 89 ppm Na).

Fertilization with salt always increases the yield of sugar beets even if potassium fertilization is already sufficient. (Cooke 1972).

Compatibility

Solubor Flow is compatible with most phytosanitary products. It has been tested in combination with the most known and used products in modern agriculture. Compatibility lists are available from your distributor.

Packaging

Available in 10-liter cans and 1300kg polypropylene container (dimensions 100x120+116cm)

Bulk density

1300kg/m³

"Viscosity @ 24 hours" mPas": ≤6000

Storage

We recommend storing the product indoors, at a temperature range between 5-35°C. If frozen, the product returns to liquid phase when the temperature rises.

Shelf life

8 months from production date

Boron: An essential plant nutrient

Boron is one of eight micronutrients essential to all plant growth. Adequate boron is necessary for proper absorption of macronutrients and for maintaining the integrity of plant cell walls.

Detecting boron deficiency

Different crops show different signs of boron deficiency. Generally, but the time symptoms are seen, yields will already have been adversely affected. The best way to establish boron need is either through soil testing or tissue analysis. In this way, boron supplementation can form part of a regular crop fertilization program.

Predicting boron deficiency

It is known worldwide that certain crops are more susceptible to boron deficiency than others. Specific crop information can be found at www.borax.com/ag.

However, it should take into account various factors when boron deficiency is suspected:

- Abundant precipitation
- Recent addition of lime (pH above 6.6)
- Previous crop
- Subtraction of boron by the previous crop
- Absence of boron intake
- Sandy soils
- Rich in organic matter

Correcting boron deficiency

Boron deficiency can be remedied by the correct application of a borate containing material in solid or liquid fertilizers, to the seedbed in annual crops or

under the foliar canopy of perennial crops. Crops can also be sprayed with boron containing solutions. These are normally tank mixed with other micronutrients or agrochemical products. Mixing with other sprays as part of a program not only saves on application cost, but allows for precise timing.

About U.S. Borax

U.S. Borax, part of Rio Tinto, is a global leader in the supply and science of borates—naturally-occurring minerals containing boron and other elements. We are 1,000 people serving 650 customers with more than 1,800 delivery locations globally. We supply around 30% of the world's need for refined borates from our world-class mine in Boron, California, about 100 miles northeast of Los Angeles.

Our local agriculture experts understand the uses and benefits of boron on crops. In addition to a global sales team, we have a number of agronomists on staff to help fertilizer distributors maximize the benefits of borates in agriculture applications. Our ag team can answer individual growers' questions and concerns about their particular crop.

High quality, high reliability, high performance borate products. It's what we're known for.

Notice: Before using these products, please read the Product Specifications, the Safety Data Sheets and any other applicable product literature. The descriptions of potential uses for these products are provided only by way of example. The products are not intended or recommended for any unlawful or prohibited use including, without limitation, any use that would constitute infringement of any applicable patents. Nor is it intended or recommended that the products be used for any described purposes without verification by the user of the products' safety and efficacy for such purposes, as well as ensuring compliance with all applicable laws, regulations and registration requirements. Suggestions for use of these products are based on data believed to be reliable. The seller shall have no liability resulting from misuse of the products and provides no guarantee, whether expressed or implied, as to the results obtained if the products are not used in accordance with directions or safe practices. The buyer assumes all responsibility, including any injury or damage, resulting from misuse of the product, whether used alone or in combination with other materials.
