

PRODUCT DATA SHEET

11% B (w/w)

Derived from boric acid $C_2H_7NO \cdot xBH_3O_3$

Reaction products of monoethanolamine and boric acid (1:3)

CAS Number 10377-81-8

Pre-mixed for easy fertilization

Liquibor® is a liquid boron product derived from boric acid. Like all U.S. Borax refined boron products, *Liquibor* is made from only high-quality borates, with no intentionally added impurities, fillers, or coatings.

Liquibor can be used in the following agriculture applications:

- Foliar application: Already in liquid form, *Liquibor* provides the convenience for direct spraying on crops and can be added to a tank mix with other fertilizers or crop protection chemicals.
- Fertigation: Applied through irrigation systems with other liquids or water-soluble fertilizers.

Recommendations for use

Liquibor should be dissolved in water and applied by spraying onto crops or by mixing with other liquid fertilizers for direct application on the ground. Use as directed. Do not exceed recommended rates.

Dispersion

Liquibor disperses easily in water.

Solubility

Liquibor is a true solution.

pH

Between 7 and 8

Packaging

Available in 1 m³ polypropylene container (dimensions 100 x 120 + 116 cm) or in bulk

Density

The product density is 1.35 kg/L

Viscosity

Temperature °C	Viscosity cP
10	1494
15	790
20	526

Ease of handling

Liquibor delivers the convenience of liquid boron fertilizer straight to your farm with no measuring or mixing required.

Organic farming

Approved suitable for organic farming in the EU according to 2021/1165 Regulation

Boron: An essential plant nutrient

Boron is one of eight micronutrients essential to all plant growth. Adequate boron is necessary for proper absorption of macronutrients and for maintaining the integrity of plant cell walls.

Detecting boron deficiency

Different crops show different signs of boron deficiency. Generally, but the time symptoms are seen, yields will already have been adversely affected. The best way to establish boron need is either through soil testing or tissue analysis. In this way, boron supplementation can form part of a regular crop fertilization program.

Predicting boron deficiency

Certain crops worldwide are known to be more susceptible to boron deficiency than others. Specific crop information can be found at www.borax.com/ag.

There are several factors which need to be taken into account when boron deficiency may be suspected:

- Abundant precipitation
- Recent addition of lime (pH above 6.6)
- Previous crop
- Subtraction of boron by the previous crop
- Absence of boron intake
- Sandy soils
- Rich in organic matter

Correcting boron deficiency

Boron deficiency can be remedied by the correct application of a borate containing material in solid or liquid fertilizers, to the seedbed in annual crops or under the foliar canopy of perennial crops. Crops can also be sprayed with boron containing solutions. These are normally tank mixed with other micronutrients or agrochemical products. Mixing with other sprays as part of a program not only saves on application cost, but allows for precise timing.

About U.S. Borax

U.S. Borax, part of Rio Tinto, is a global leader in the supply and science of borates—naturally-occurring minerals containing boron and other elements. We are 1,000 people serving 650 customers with more than 1,800 delivery locations globally. We supply around 30% of the world's need for refined borates from our world-class mine in Boron, California, about 100 miles northeast of Los Angeles.

Our local agriculture experts understand the uses and benefits of boron on crops. In addition to a global sales team, we have a number of agronomists on staff to help fertilizer distributors maximize the benefits of borates in agriculture applications. Our ag team can answer individual growers' questions and concerns about their particular crop.

High quality, high reliability, high performance borate products. It's what we're known for.

Notice: Before using these products, please read the Product Specifications, the Safety Data Sheets and any other applicable product literature. The descriptions of potential uses for these products are provided only by way of example. The products are not intended or recommended for any unlawful or prohibited use including, without limitation, any use that would constitute infringement of any applicable patents. Nor is it intended or recommended that the products be used for any described purposes without verification by the user of the products' safety and efficacy for such purposes, as well as ensuring compliance with all applicable laws, regulations and registration requirements. Suggestions for use of these products are based on data believed to be reliable. The seller shall have no liability resulting from misuse of the products and provides no guarantee, whether expressed or implied, as to the results obtained if the products are not used in accordance with directions or safe practices. The buyer assumes all responsibility, including any injury or damage, resulting from misuse of the product, whether used alone or in combination with other materials.
